

Broward County Radio System

Twenty-nine (29) Municipalities and the Broward Municipal Services District are hosted on the Broward County Radio System

FLOW OF A 911 CALL

BROWARD COUNTY REGIONAL DISPATCH SYSTEM

29 MUNICIPALITIES AND THE BROWARD MUNICIPAL SERVICES DISTRICT

Caller calls 911; the call is answered by a call taker at one of the three Public Safety Answering Points (PSAP)

Using the computer-aided (CAD) system, call taker asks the caller questions about the nature of the emergency

Dispatcher uses CAD to assign unit(s) for emergency response, then contacts the responder via radio

Emergency responder is dispatched and goes en route

Emergency responder arrives at the scene

Public Safety Radio Equipment Locations

Broward County Hollywood West Lake Park Site

Broward County Water and Waste Water Site

Public Safety Radio Towers

- The P25 Radio System will require 2 locations in Hollywood:
 - West Lake Park, and the Water and Waste Water plant
- Both towers are needed:
 - **To properly cover emergency first responders in the City of Hollywood**
 - To eliminate current dead spots along the oceanfront, high rise buildings and western parts of the County.
- Towers will also provide space for City's Public Safety Equipment
- 300 ft high towers are required for optimal Regional system performance for Hollywood and surrounding users
 - Top mounted candelabra for multiple antennas
 - 325 ft total height with antennas
 - Lattice self supporting tower (no guy wires)
 - Equipment shelter at tower base

Tower Requirements

- Must be high enough to properly cover Hollywood and the neighboring jurisdictions
- Must be tall enough to accommodate the required number of antennas
 - 6 radio system antennas
 - 2 microwave dish antennas
- Must be tall enough to provide radio signal into buildings (e.g. schools, stores and high rises)
- Must be tall enough to cover areas otherwise blocked by buildings

Benefits of New Tower in Hollywood

- **Significantly improves radio coverage gaps**
- Improved coverage for the entire system
- Increased room for additional public safety radio emergency services (i.e. FirstNet)
- Improved overlapping coverage with surrounding sites, providing improved performance in the event of system interruptions
- Increased additional view of area from obstructions
