Planning and Zoning Board
City of Hollywood
2600 Hollywood Boulevard,
Hollywood FL, 33022

**RE: CRITERIA STATEMENT(S) FOR APPLICABLE CRITERIA FOR HISTORIC PRESERVATION BOARD
AT 1621 JEFFERSON ST.**

Dear Planning and Zoning Board,

This firm represents Mr. Djazir Abella and his wife Brigitte Abella (the “Applicant”), owners of the lot located at 1621 Jefferson St., (“Property”). Please consider this letter the applicant’s letter of intent in support of an application seeking a certificate of appropriateness for design for a new proposed single-family residence of such lot mentioned above.

Property. The property is located at 1621 Jefferson St. The lot has 8,175.71 square feet in size and is identified by the Broward County Property Appraiser by ID No. 514215022680. The lot has an existing building built in 1948/1950 which will be demolished to build a new house. The design intent for this new single-family residence is modern.

Criteria Statement Analysis:

The applicant satisfies the variance criteria delineated in Section 5.5.6.3.2 as follows:

1. Integrity of Location

The house's concept is to experiment with different volumes that create spaces, as one of the ideas in the implementation is to ensure that the house, despite having to be elevated by code requirements, is implanted generously. The search for exterior-interior integration is highlighted without sacrificing privacy in the front;

despite large windows, both the pedestrian and the owner maintain their privacy. The modern typology of the proposed new single-family residence respects all the zoning setbacks and heights. The design intent includes for the owner to enjoy an inviting recreational area for that the landscaping work is another area where a lot of effort is put in to ensure that the vegetation blends in with the architecture and softens the modern volumes. The hunt for a modern home, but warm is the first goal in our residential design.

2. Setting

The setting of this proposed residence is a two-story building that is compatible with the homes in the area.

3. Materials

The proposed residence is structurally designed with block and logwood, with the facade materials primarily consisting of stucco, simulated wood, exposed concrete, and steel claddings. The stucco will be painted white, and the steel claddings will be black. All these materials are compatible with the homes in the neighborhood.

4. Workmanship

As this residence is going to be Abella Family main house, the intent is to deliver the residence with the best standards available. The workmanship and quality of the construction will meet or exceed the standards in the area from a licensed construction professional.

5. Association

We believe this design intent will adhere to the Citywide Master Plan and the Comprehensive Plan.

Conclusion.

This application meets all of the standards of the City regulations. We look forward to your review and approval. If you have any questions or concerns, please do not hesitate to call us at 954 329 8599 or email us at click@ugdesignbuild.com.

Sincerely,

Urban Group Architect.

The possibility of restoring / remodeling and expanding the house was studied by the owners as the first option, maintaining the architectural essence of the house, however, the owners' desire to expand the house is truncated by having to raise the level of the house to FEMA, which not only implies raising the ground level but also having to raise the levels of windows, doors and the roof, adding to this having to update the mechanical, electrical and plumbing systems of the current home, restoration/remodeling costs rise.

Not only was the possibility of restoring and remodeling studied, but also the possibility of reusing the existing structure on the land, but the conclusion of each study remains that it is better to demolish and rebuild.

RE: Permit # 30401419

Dear Sir or Madam:

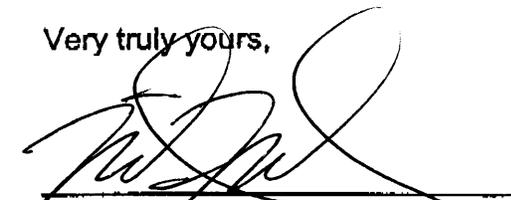

With regard to the above-mentioned permit, we acknowledge that the Sidewalk Form inspection was not inspected by the City of Hollywood prior to the completion of the work allowed by the permit.

We accept the work as completed and hold the city harmless from any liabilities that may arise from work completed under this permit.

We ask that you perform a final inspection on the completed work as soon as possible.

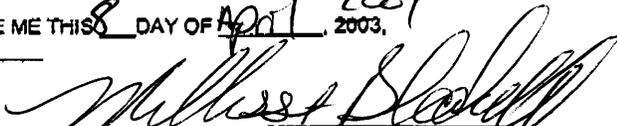

Thank you for your cooperation in this matter.

1.0 INTRODUCTION

On February 9, 2022, Mr. Mariano Isman retained Absolute Civil Engineering Solutions, LLC (ACES) to provide Structural Engineering Assessment Services at the single-family residence located at 1621 Jefferson Street, Hollywood, Florida (See attachment A).

The purpose of our investigation was to conduct a visual inspection, review existing documents pertaining to the site and to evaluate any observed or reported damaged areas of the building, including but not necessarily limited to, the following:

- Exterior wall, cladding and stucco finish. In particular, the examination of cracks/separations in the walls, depression in the floor slab, spalled concrete and rusted rebar in the ceiling and walls of the structure.
- Examine water stains, signs of excess moisture and water intrusion concerns.
- Cracks/separations in the slab, beam and columns of the subject buildings.
- Cracks/separations in the vicinity of the foundation to column connection.
- Review of various documents regarding concrete damage, proposed concrete restoration work, waterproofing and site painting.
- Review existing Mechanical, Electrical and Plumbing (MEP) systems at the residence.

2.0 BASIS OF REPORT

This report is based on the following:

- Interview with the property owners.
- Inspection of the exterior and interior of the subject building.
- Pertinent dimensions and photographs of the subject building and damaged areas in particular.
- Review of Site Drawings for the subject building.

- Review of information regarding the structure's age, footprint and location, obtained from the Broward County Property Appraiser's website.
- Review of ASCE standard SEI/ASCE 30-00 entitled "Guideline for Condition Assessment of Building Envelope".

This report was prepared for the exclusive use of Urban Group and the City Of Hollywood, and is not intended for any other purpose. Absolute Civil Engineering Solutions, LLC (ACES) assumes no responsibility whatsoever for the use of this report by a third party. This report is based on information available to us at this time. Should additional information be presented or disclosed in the future, we reserve the right to review such information and, if necessary, revise this report and our conclusion in light of the new information acquired.

3.0 PROPERTY DESCRIPTION

The subject property consist of a single-family residential building with three (3) bedrooms and two (2) bathrooms. The building was initially constructed in 1948/1950 and consists of an elevated wood floor system, exterior reinforced concrete CMU block walls and a gable roof system covered with clay tiles, all supported on a stem wall foundation system. Surface drainage is within swale areas on the property and partially towards the street. For the purposes of this report, as a reference, the front of the subject buildings faces primarily to the south.

4.0 CONCLUSIONS

Based on our findings and observations as noted in this report, it is our technical opinion that:

- The building finished floor elevation (FFE = 7.12 ft NAVD88) is marginally above the base flood elevation (7.0 ft NAVD). Some sections of the grounds outside the residence are below the street elevation. An attempt to meet the current flood criteria would involve raising the current floor elevation, redesigning the structure and raising the roof. The cost to accomplish this, among other things, would make the project impractical

- Given the potential size and complexity of a restoration/remodel project, the building/structural, mechanical, electrical and plumbing (BSMEP) components inspected will have to be brought in compliance with the Florida Building Code, 7th Edition (2020).
- The hairline to 1/8 inch wide cracks/separations observed in the exterior concrete walls is the result of shrinkage of cementitious materials, thermal expansion and contraction of building material and normal differential movement of the structure over the years of service. Given the age of the structure (over 72 years) the overall effects of exposure to the elements, potential water intrusion, and concrete deterioration makes “demolition and rebuild” a better alternative than “restoration and remodel” of the existing structure.
- The electrical systems within the entire building have significant code compliance concerns and defects, which will require complete upgrade and rewiring of the building. At this time, the building is a potential fire hazard and cannot be rented or used as a dwelling unit.
- The building is not safe for occupation and the extent of the structural and electrical repairs required to bring the building and site in compliance with current codes requirements is impractical and not cost effective as a restoration/remodeling project. Consequently, ACES recommends that the existing structure be “demolished and rebuilt” to current building code requirements.

5.0 DISCUSSION

5.1 INTERVIEW

The following information regarding the history of the structures and observed damage was obtained from, Broward County Property Appraiser website and the property owners:

- The property was constructed in 1948/1950.

- The building floor elevation and ceiling heights are very low compared to current requirements.
- The property owners was very concerned about the existing condition of the electrical and structural systems of the subject building.
- The property owner supplied ACES with plans, specifications and history of previous and ongoing repairs conducted at the site.

5.2 INSPECTION

On January 8, 2022, Wayne Webb, P.E. of Absolute Civil Engineering Solutions, LLC (ACES), in the presence of the property owner, inspected the interior and exterior of the one story single-family residence. General dimensions and photographs were taken during the inspection to document observations. All photographs are available for review and several are included in this report, which identifies representative conditions observed in and around the building and reflects typical conditions observed during the inspection (See Attachment B).

The following are some of the data and observations used for our technical evaluation of the reported damage at the building:

- Perimeter exterior finish grade of the buildings was lower than the street level.
- The South (front), East, West and North (rear) elevations of the residence (See photographs 1 thru 4).
- There were no significant evidence of wide cracks or separations on the exterior walls of the buildings indicative of major differential movement/settlement.
- Electrical main and small wood deck at the northwest side of the residence (See photograph 5).
- Soffit intact and clay barrel tile roof (See photograph 6).
- Relatively new electrical main panel at the northwest area of the building (See photograph 7).
- Some plumbing and gas lines at the central area of the west elevations (See photograph 8).
- Step up to floor elevation at the front of the residence (See photograph 9).

- Front window at the main entrance to the building (See photograph 10).
- The living room of the residence with fire place (See photograph 11).
- The wood sheathing, trusses and rafters over the living room of the residence (See photograph 12).
- The kitchen area to the west of the living room of the residence (See photographs 13 & 14).
- The southeast bedroom of the residence (See photograph 15).
- The hallway to bedroom and bathroom on the east side of the residence. (See photograph 16).
- The hallway bathroom on the east side of the residence (See photograph 17).
- The northeast bedroom on the east side of the residence (See photograph 18).
- The AC air handler unit in the AC closet in the northeast bedroom on the east side of the residence (See photograph 19).
- Step down to the family room on the north side of the residence as well as entrance to the northwest bedroom (See photographs 20 & 21).
- The bathroom at the northwest area of the residence (See photographs 22,).
- The northwest bedroom of the residence with in-wall AC unit, electrical panel and exterior door (See photographs 23, 24 & 25).
- The AC condenser unit on the northeast area of the residence (See photograph 26).
- Although some of the electrical system has been updated, much of the original electrical wiring is still in place and comingled with the new, which presents a potential fire hazard.
- There evidence of the existence of cast iron sanitary sewer lines and some galvanized steel water supply pipes at the residence.
- The existing mechanical system is a combination of a relatively new HVAC system combined with some wall units. The overall mechanical system needs to be upgraded.
- The finish floor elevation (FFE) marginally above the minimum FEMA flood elevation criteria.

5.3 ANALYSIS

The subject building consist of a single-family residential building with three (3) bedrooms and two (2) bathrooms. The building was constructed in 1948/1950 and consists of wood floor system, exterior reinforced concrete CMU brick walls and a gable roof system with clay tiles, all supported on a stem wall foundation system. The property owner was very concerned about the observed damage/code compliant issues with the subject structures and electrical systems. The owners asked ACES to conduct a visual structural assessment. The property owner supplied ACES with the site drawings/plans and history of previous repairs conducted at the site.

A visual non-destructive inspection of the damaged areas revealed the observations documented in section 5.2 of this report. Our observation included, but were not necessarily limited to, the following; the finished floor elevation (FFE 7.12ft NAVD 88) was marginally above the base flood elevation (7.0ft NAVD88), hairline to 1/8 inch wide cracks/separations noted in the exterior walls, and significant defects in the electrical systems.

Structures constructed with a combination of Concrete Masonry Unit (CMU) systems and reinforced concrete elements often times over the service life of the structure develop cracks/separations in the stucco, reinforced elements, mortar joints and block work due to normal differential movement and exposure to the elements over the years. When these cracks/separations are exposed to chlorides, water during certain rain events, and water pressure, water will migrate/seep into the compromised concrete element, and may over time enter into the building envelope. In addition, the clay barrel tile roof system at the subject residence appears to be nearing the end of its services life therefore full roof replacement of the roof system is necessary in the near future.

Cementitious materials expands and contracts naturally because of changes in moisture and temperature and can cause the appearance of shrinkage cracks in recently poured concrete material. When differential foundation movement occurs in a structure it typically manifests itself in the form of cracks at joints and openings as these are the weakest parts of the structure. When portions of a structure settle unevenly, it results in cracks at joints between concrete blocks and in stucco. Also, concrete structures such as columns, slabs and concrete beams, heat and cool during the day

and the walls expand and contract. These daily cycles of thermal expansion and contraction, combined with the effects of weather, can enlarge or enhance cracks caused by differential movement. Differential settlement is common and ordinary for structures constructed on soil supported on shallow foundation systems, which is the case with the 1621 Jefferson Street residence. Many mechanisms can cause differential movement including densification of load bearing soils below the foundation footings and repeated fluctuations of the water table. Further, given the age of the structure (over 72 years) the overall effects of exposure to the elements, potential water intrusion, and concrete deterioration makes “demolition and rebuild” a better alternative than “restoration and remodel” of the existing structure.

Further, the electrical system as well as the mechanical and plumbing systems associated with the existing house is in need of significant upgrades and standardizations. The compromised electrical system is at present making the residence a potential fire hazard, making “demolition and rebuild” an even better alternative than “restoration and remodel” of the existing structure

Based on our findings and observations as noted in this report, it is our technical opinion that the building finished floor elevation (FFE = 7.12 ft NAVD88) is marginally above the base flood elevation (7.0 ft NAVD). Some sections of the grounds outside the residence are below the street elevation. An attempt to meet the current flood criteria would involve raising the current floor elevation, redesigning the structure and raising the roof. The cost to accomplish this, among other things, would make the project impractical. Further, given the potential size and complexity of a restoration/remodel project, the building/structural, mechanical, electrical and plumbing components inspected will have to be brought in compliance with the Florida Building Code, 7th Edition (2020).

The hairline to 1/8 inch wide cracks/separations observed in the exterior concrete walls is the result of shrinkage of cementitious materials, thermal expansion and contraction of building material and normal differential movement of the structure over the years of service. Given the age of the structure (over 72 years) the overall effects of exposure to the elements, potential water intrusion, and concrete deterioration makes “demolition and rebuild” a better alternative than “restoration and remodel” of the existing structure.

In addition to the above, the electrical systems within the entire building have significant code compliance concerns and defects, which will require complete upgrade and rewiring of the building. At this time, the building is a potential fire hazard and cannot be rented or used as a dwelling unit. The building is not safe for occupation and the extent of the structural and electrical repairs required to bring the building and site in compliance with current codes requirements is impractical and not cost effective as a restoration/remodeling project. Consequently, ACES recommends that the existing structure be “demolished and rebuilt” to current building code requirements.

The above submitted opinions are based upon our inspection and observations, generally accepted engineering criteria, and the professional knowledge and experience of the author of this report in the forensic analysis of residential and commercial buildings and components. Such an inspection cannot detect all existing or potential defects and it should, therefore, be understood that future conditions affecting items discussed in this report cannot be predicted since they are all subject to change. The scope of this report extends only to the above noted items. Further, this engineering report should not be considered as a warranty or guarantee expressed or implied of any kind.

ALL ELEVATIONS ARE REFERENCED TO NAVD88 VERTICAL DATUM

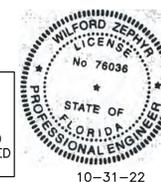

- NOTES:
1. FILTER FABRIC TO MEET FDOT INDEX NO. 199, 280 SPECIFICATIONS AND FDOT SECTION 985.
 2. CONTRACTOR TO REMOVE FILTER FABRIC FROM AREA DRAIN AFTER SOD & PAVER SAND SET PAVER INSTALLATION.

POLLUTION PREVENTION FOR AREA DRAIN
N.T.S.

BMP NOTES:

1. ALL SEDIMENT CONTROL MEASURES ARE TO BE ADJUSTED TO MEET FIELD CONDITIONS AT THE TIME OF CONSTRUCTION AND BE CONSTRUCTED PRIOR TO ANY GRADING OR DISTURBANCE OF EXISTING SURFACE MATERIAL ON BALANCE OF SITE. PERIMETER SEDIMENT BARRIERS SHALL BE CONSTRUCTED TO PREVENT SEDIMENT OR TRASH FROM FLOWING OR FLOATING ON TO ADJACENT PROPERTIES.
2. PERIODIC INSPECTION AND MAINTENANCE OF ALL SEDIMENT CONTROL STRUCTURES MUST BE PROVIDED TO ENSURE INTENDED PURPOSE IS ACCOMPLISHED. THE DEVELOPER, OWNER AND/OR CONTRACTOR SHALL BE CONTINUALLY RESPONSIBLE FOR ALL SEDIMENT CONTROLS. SEDIMENT CONTROL MEASURES SHALL BE IN WORKING CONDITION AT THE END OF EACH WORKING DAY.
3. SEDIMENT WILL BE PREVENTED FROM ENTERING ANY STORM WATER SYSTEM, DITCH OR CHANNEL. ALL STORMWATER INLETS THAT ARE MADE OPERABLE DURING CONSTRUCTION SHALL BE PROTECTED SO THAT SEDIMENT-LADEN WATER CANNOT ENTER THE CONVEYANCE SYSTEM WITHOUT FIRST BEING FILTERED OR OTHERWISE TREATED TO REMOVE SEDIMENT.
4. WHERE CONSTRUCTION VEHICLE ACCESS ROUTES INTERSECT PAVED PUBLIC ROADS, PROVISIONS SHALL BE MADE TO MINIMIZE THE TRANSPORT OF SEDIMENT BY TRACKING ONTO THE PAVED SURFACE. WHERE SEDIMENT IS TRANSPORTED ONTO A PUBLIC ROAD SURFACE WITH CURBS AND GUTTERS, THE ROAD SHALL BE CLEANED THOROUGHLY AT THE END OF EACH DAY. SEDIMENT SHALL BE REMOVED FROM THE ROADS BY SHOVELING OR SWEEPING AND TRANSPORTED TO A SEDIMENT CONTROL DISPOSAL AREA. STREET WASHING SHALL BE ALLOWED ONLY AFTER SEDIMENT IS REMOVED IN THIS MANNER. THIS PROVISION SHALL APPLY TO INDIVIDUAL SUBDIVISION LOTS AS WELL AS TO LARGER LAND DISTURBING ACTIVITIES.
5. PERMANENT OR TEMPORARY SOIL STABILIZATION SHALL BE APPLIED TO DENUDED AREAS WITHIN SEVEN (7) DAYS AFTER FINAL GRADE IS REACHED ON ANY PORTION OF THE SITE. TEMPORARY SOIL STABILIZATION SHALL BE APPLIED WITHIN SEVEN (7) DAYS TO DENUDED AREAS THAT MAY NOT BE AT FINAL GRADE BUT WILL REMAIN UNDISTURBED FOR LONGER THAN THIRTY (30) DAYS. PERMANENT STABILIZATION SHALL BE APPLIED TO AREAS THAT ARE TO BE LEFT UNDISTURBED FOR MORE THAN ONE YEAR.
6. DURING CONSTRUCTION OF THE PROJECT, SOIL STOCKPILES SHALL BE STABILIZED, COVERED OR CONTAINED WITH SEDIMENT TRAPPING MEASURES. THE CONTRACTOR IS RESPONSIBLE FOR THE TEMPORARY PROTECTION AND PERMANENT STABILIZATION OF ALL SOIL STOCKPILES ON SITE AS WELL AS SOIL INTENTIONALLY TRANSPORTED FROM THE PROJECT SITE.
7. ALL TEMPORARY EROSION AND SEDIMENT CONTROL MEASURES SHALL BE REMOVED WITHIN 30 DAYS AFTER FINAL SITE STABILIZATION OR AFTER THE TEMPORARY MEASURES ARE NO LONGER NEEDED.
8. PROPERTIES AND WATER WAYS DOWNSTREAM FROM CONSTRUCTION SITE SHALL BE PROTECTED FROM SEDIMENT DEPOSITION AND EROSION AT ALL TIMES DURING CONSTRUCTION.
9. CONTRACTOR IS RESPONSIBLE FOR ALL SURFACE WATER DISCHARGES, RAINFALL RUN OFF OR DEWATERING ACTIVITIES.
10. CONTRACTOR MUST INCORPORATE ALL BMP'S NECESSARY TO MEET OR EXCEED STATE WATER QUALITY AND SWPPP REQUIREMENTS.
11. THE POLLUTION PREVENTION PLAN IS A MINIMUM GUIDELINE ONLY. ADDITIONAL BMP'S MAY BE NECESSARY AT CONTRACTOR'S EXPENSE.

Landscape Data:

Single Family Districts (RS)	Required	Provided
Perimeter Landscape One 12' street tree per 50 linear feet or portion thereof, of street frontage of property wherein said improvements are proposed.	2 Trees (59 LF)	2 Trees (Purple Tabebuia)
Open Space A minimum of 20% of the required front yard area shall be landscaped pervious open space. All pervious areas are to be sodded or landscaped with living plant material such as ground cover and/or shrubs. One tree per 1,250 sq. ft. (including any fraction) of front yard area.	1 Trees (1,200 SF)	1 Trees (1 Live Oak)
Mitigation Trees 28" of Tree Mitigation Required; see sheet LA-2 for details.	14 Trees (2"DBH)	14 Trees (Silver Buttonwood & Geiger Trees)
Total	17 Trees	17 Trees
Minimum Tree Sizes Shade trees: 2" DBH/ 12' height. Palm trees: 8' of GW or CT.		
Native Requirements A minimum of 60% of required trees and 50% of required shrubs must be native species.	8 Trees (60% of 17 = 11)	15 Trees

Landscape Notes:

- Alternative plant species for required landscape may be permitted subject to review and approval by the City of Hollywood Planning Department prior to installation.
- All prohibited exotic or invasive species shall be removed from the entire site prior to the issuance of a Certificate of Occupancy.
- All required landscaping shall be installed prior to the issuance of a Certificate of Occupancy.
- No Cypress Mulch is to be used on site. Eucalyptus or Melaleuca Mulch is to be used in a 3" consistent layer in all planting beds.
- Enhanced landscaping beyond minimum requirements will conform to all applicable sections of the City of Hollywood Landscape Manual.
- This plan has been designed to meet the tree planting requirements contained within the FPL document entitled 'Plant the Right Tree in the Right Place' and City of Hollywood Landscape Manual.
- For existing or proposed utilities, no tree shall be planted where it could, at mature height conflict with overhead power lines.
- Tree species shall be selected as to minimize conflicts with existing or proposed utilities.
- See engineer's plans for all underground & overhead utilities and field locate all prior to installation; contact Landscape Designer/Owner regarding any conflicts.
- All site drainage by others.
- City assumes liability and maintenance of trees placed outside of property line.
- Landscape adjacent to vehicular traffic to be maintained to preserve site line visibility.

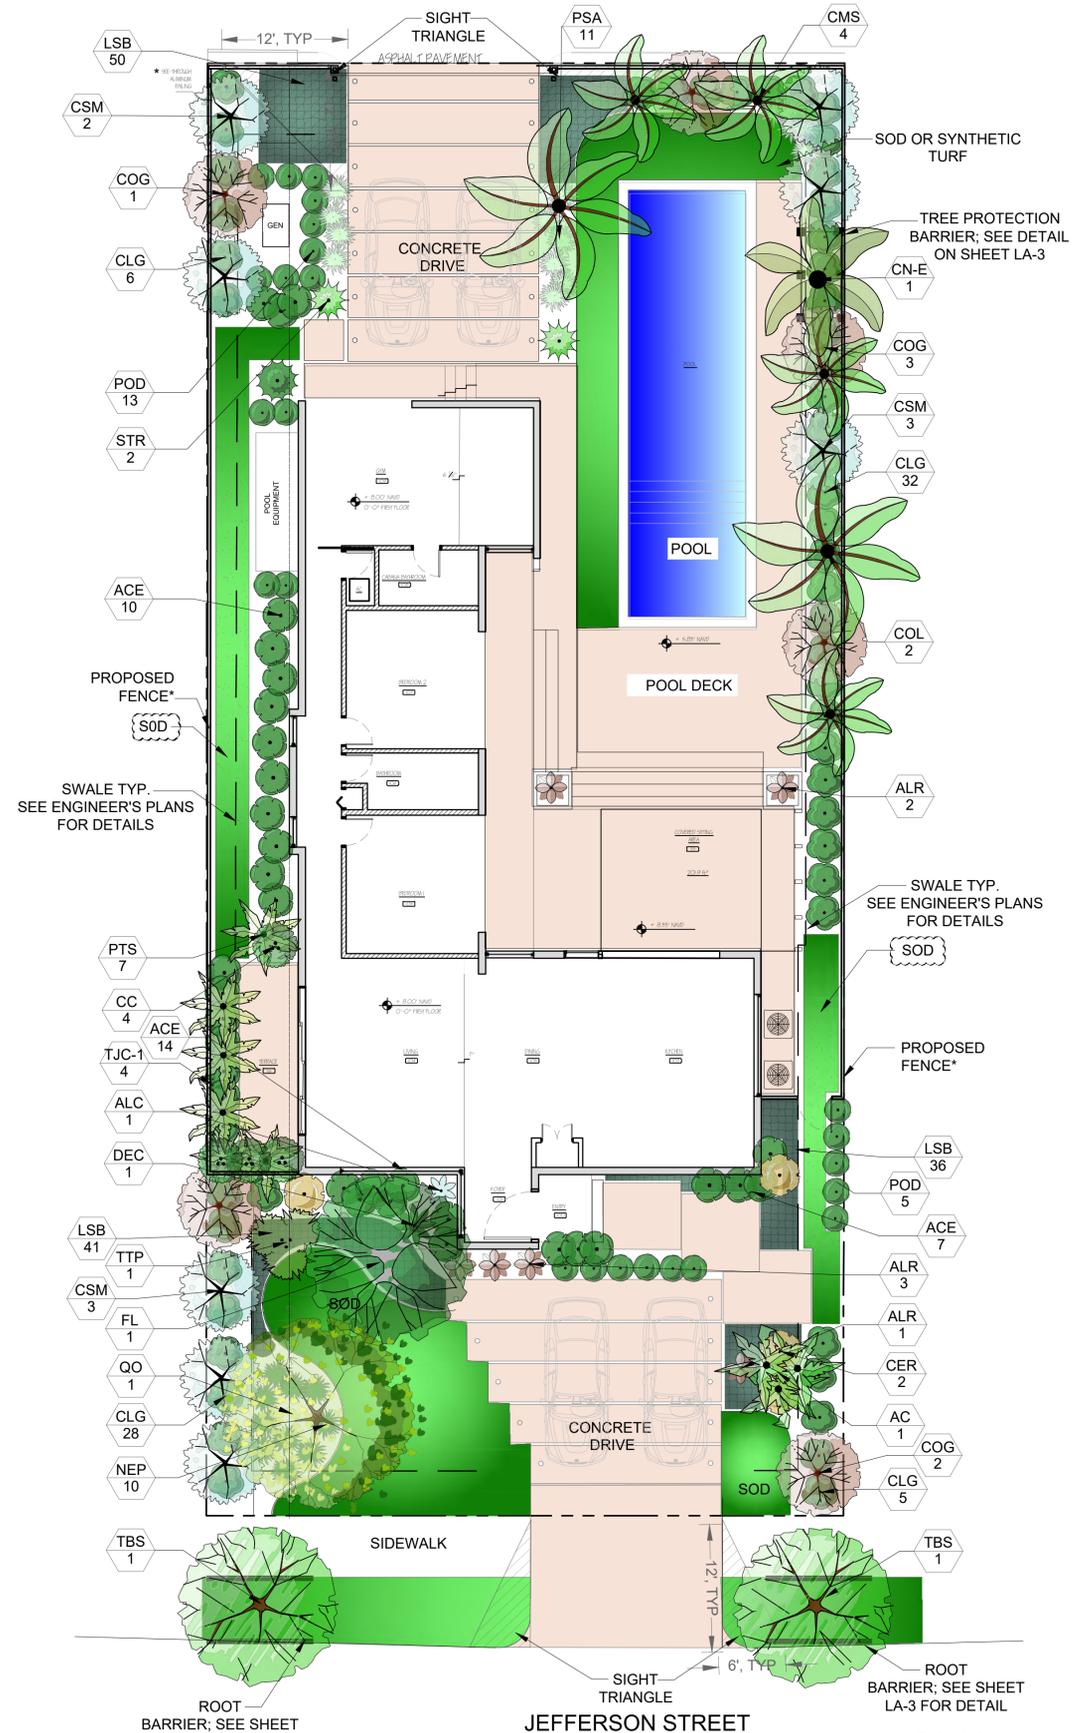

-Tree Relocation Note: Do not relocate without obtaining permit from the City of Hollywood. Existing tree(s) to be relocated require root pruning by a qualified professional prior to relocation. If the tree(s) does not survive after relocation and is dead or in poor health at time of final inspection, mitigation will be required through payment into the tree preservation fund, equal to \$350 per every 2" tree mitigation owed.

-Irrigation Note: Per Article 9: 9.4(4): Irrigation. All landscaped areas shall receive 100% coverage by means of an automatic sprinkler system designed and constructed in accordance with the City of Hollywood Code of Ordinances, the Florida Building Code, State Law, and the regulations of the South Florida Water Management District. Failure to maintain or disconnection of the irrigation system shall be a violation of these regulations.

TREE PROTECTION

LANDSCAPE SPECIFICATIONS

PART 1: GENERAL CONDITIONS

- 1.01 SCOPE:
- A. The landscape contract includes the supplying and planting of all trees, shrubs, vines, and ground cover together with all necessary labor, equipment, tools and materials needed for the successful completion, execution and maintenance of the landscape plans.
- 1.02 AGENCY STANDARDS:
- A. Grades and standards of plant materials to be used shall be true to name, size, condition and graded Florida #1 or better as stated in: Grades and Standards of Florida Plant Materials published by the State of Florida Department of Agriculture, Tallahassee, Florida.
- 1.03 SITE EXAMINATION:
- A. The Landscape Contractor shall personally examine the site and fully acquaint him/herself with all of the existing conditions in order that no mis-understanding may afterwards arise as to the character or extent of the work to be performed, and additionally, in order to acquaint him/herself with all precautions to be taken in order to avoid injury to property or persons. No additional compensation will be granted because of any unusual difficulties which may be encountered in the execution or maintenance of any portion of the work.
- 1.04 ERRORS AND OMISSIONS:
- A. The plant list is a part of the drawings and is furnished as a convenience. The plant list indicates the name, size and quantities of specific plant materials as called for and is located on the drawings. The Landscape Contractor is responsible for his/her own quantity count, and any discrepancy between drawings and plant list shall be considered as correct on the drawings.
- B. The Landscape Contractor shall not take advantage of errors or omissions in the specifications or contract drawings. Full instruction will be given if such errors are discovered. Upon the discovery of any discrepancies in, or omissions from the drawings or documents, or should the Landscape Contractor be in doubt as to their meaning, the Landscape Architect shall be notified and will determine the actions necessary to each query.
- C. If plans and specifications are found to disagree after the contract is awarded, the Landscape Architect shall be the judge as to which was intended.
- 1.05 EXECUTION OF THE WORK:
- A. The Landscape Contractor shall have his labor crews controlled and directed by a Foreman well versed in plant materials, planting methods, reading blueprints, and coordination between job and nursery in order to execute installation correctly and in a timely manner.
- B. The Landscape Contractor shall provide a competent English-speaking Foreman on the project at all times, who shall be fully authorized as the Contractor's agent on the work. The Superintendent shall be capable of reading and thoroughly understanding the Plans, Specifications and other Contract Documents. If the Superintendent is deemed incompetent by the Landscape Architect, he (the superintendent) shall be immediately replaced.
- C. The Landscape Contractor shall be available for any meetings with the Owner and/or Landscape Architect during implementation of the job. Any additional work or changes required as a result of failure to communicate with the Owner or Landscape Architect during implementation will be the responsibility of the Landscape Contractor.

- 1.06 PROTECTION OF PUBLIC AND PROPERTY:
- A. The Landscape Contractor shall protect all materials and work against injury from any cause and shall provide and maintain all necessary safeguards for the protection of the public. He shall be held responsible for any damage or injury to persons or property which may occur as a result of his fault or negligence in the execution of the work, i.e. damage to underground pipes or cables.

- 1.07 CHANGES AND EXTRAS:
- A. The Contractor shall not start work on any changes or "extras" in the project until a written agreement setting forth the adjusted prices has been executed by the Owner and the Contractor. Any work performed on changes or "extras" prior to execution of a written agreement may or may not be compensated for by the Owner at his discretion.

- 1.08 GUARANTEE:
- A. The Landscape Contractor shall furnish a written guarantee warranting all materials, workmanship and plant materials, except sod, for a period of ONE (1) YEAR from the time of completion and acceptance by the Landscape Architect and Owner. Sod shall be guaranteed to 90 calendar days after acceptance by the Landscape Architect and Owner. All plant material shall be alive and in satisfactory condition and growth for each specific kind of plant at the end of the guarantee period. The guaranteeing of plant material shall be construed to mean complete and immediate replacement with plant material of the same variety, type, size, quality and grade as that of the originally specified material. During the guarantee period it shall be the Landscape Contractor's responsibility to immediately replace any dead or unhealthy material as determined by the Landscape Architect. The guarantee will be null and void if plant material is damaged by lightning, hurricane force winds, or any other acts of God, as well as vandalism or lack of proper maintenance.
- B. At the end of the specified guarantee period, any plant required under this contract that is dead or not in satisfactory condition, as determined by the Landscape Architect, shall be replaced. The Landscape Contractor shall be responsible for the full replacement cost of plant materials for the first replacement and share subsequent replacement (s) costs equally with the Owner, should the replacement plant fail to survive.

- 1.09 CARE AND MAINTENANCE:
- A. The Landscape Contractor shall be responsible for the care and maintenance of all plant materials and irrigation when applicable until final acceptance by the Owner or Landscape Architect.
- B. The Owner agrees to execute the instructions for such care and maintenance.

- 1.10 SAFETY:
- A. It shall be the responsibility of the Landscape Contractor to protect all persons from injury and to avoid property damage. Adequate warning devices shall be placed and maintained during the progress of the work.
- B. It shall be the contractor's responsibility to conform to all local, state, and federal safety laws and codes including the Federal Occupational Safety and Health Act (O.S.H.A.).

- 1.11 CONTRACTOR QUALIFICATION:
- A. The Owner may require the apparent contractor (s) to qualify him/herself to be a responsible entity by furnishing any or all of the following documentary data:
1. A financial statement showing assets and liabilities of the company current to date.
 2. A listing of not less than (3) completed projects of similar scope and nature.
 3. Permanent name and address of place of business.
 4. The number of regular employees of the organization and length of time the organization has been in business under the present name.

- 1.12 INSURANCE AND BONDING:
- A. The contractor (s) shall submit proof of insurance for this job for the time period that the work is done. The minimum amount of insurance shall be \$300,000.00 per person and \$500,000.00 per aggregate or as required by owner and agreed to in the contract. The successful bidder shall be required to have this coverage in effect before beginning work on the site.
- B. The Owner shall have the right to require the Contractor to furnish bonds covering faithful performance of the Contract and payment obligations arising thereunder as stipulated in bidding requirements or specifically required in the Contract Documents on the date of execution of the Contract.

- 1.13 PERMITS AND CERTIFICATES:
- A. All contractors shall secure and pay for all permits and certificates required for his/her class of work.

PART 2: MATERIALS

- 2.01 PLANT MATERIALS:
- A. A complete list of plants is shown on the drawings, including a schedule of quantities, sizes, and such other requirements deemed necessary. In the event discrepancies occur, the specifications on the drawings shall govern.
- B. Substitutions: Substitutions of plant materials or changes in size or spacing of materials will be permitted ONLY upon written authorization by the Owner or the Landscape Architect. If plant material is not of sufficient size to meet applicable codes, a letter of variance from the appropriate agency must be obtained by the Contractor prior to issuance of any change order. If material of smaller size is to be accepted, the quantity of material shall be increased, at no additional cost to the Owner, to meet the intent of the drawings.
- C. All plant materials shall have a habit of growth that is normal for the species and shall be healthy, vigorous and equal to or exceed the measurements specified in the plant list, which are the minimum acceptable sizes. Plants shall be measured before pruning with branches in normal position. Any necessary pruning shall be done at the time of planting.
- D. All plant materials shall be nursery grown, unless otherwise noted, Florida #1 or better and shall comply with all required standards and plant regulations as set forth by the Florida Department of Agriculture's Grades and Standards for Nursery Plants, most current addition and Grades and Standards for Nursery Plants, most current addition.
- E. Plants that do not have the normal balance of height and spread typical for the respective plant shall not be acceptable.
- F. The Landscape Contractor shall install each plant to display its best side. Adjustments may be required if plants are not installed properly and/or approved by the Landscape Architect at no additional cost to owner.

- 2.02 INSPECTION:
- A. The Landscape Architect and Owner may inspect trees and shrubs at place of growth or at site before planting, for compliance with requirements for genus, species, variety, size and quality. The Landscape Architect and Owner retain the right to further inspect trees and shrubs for size and condition of balls and root systems, insects, injuries and latent defects, and to reject unsatisfactory or defective material at any time during progress of work. Rejected plant materials shall be immediately removed from project site.
- 2.03 PROTECTION OF PLANT MATERIALS:
- A. Balled and burlapped plants (B & B) shall be dug with firm natural balls of earth of sufficient diameter and depth to encompass the fibrous and feeding root system necessary for full recovery of the plant. Balls shall be firmly wrapped with burlap similar materials and bound with cord, rope, or wire mesh. All collected plants shall be balled and burlapped.
- B. Plants with broken, damaged or insufficient rootballs will be rejected.
- C. All plant material shall be protected from possible bark injury or breakage of branches. All plants transported by open trucks shall be adequately covered to prevent windburn, drying or damage to plants.
- D. Plants which cannot be planted immediately on delivery to the site shall be covered with moist soil, mulch or other protection from the drying of wind and sun. All plants shall be watered as necessary by the Landscape Contractor until planted.

- 2.04 STORAGE:
- A. All plant materials shall be stored on the site in designated areas, specified by the Landscape Architect or Owner's agent.
- B. No plant material shall be stored longer than seventy-two (72) hours unless approved by Landscape Architect and/or owner.
- C. The Landscape Architect reserves the right to reject any plant materials not in conformance with these specifications.
- D. All rejected material shall be immediately removed from the site and replaced with acceptable material at no cost to the Owner.
- 2.05 PROTECTION DURING PLANTING:
- A. Trees moved by winch or crane shall be thoroughly protected from chain marks, girdling or bark slippage by means of burlap, wood battens or other approved methods. Battens shall NOT be attached to the tree with nails.
- 2.06 PLANTING SOIL:
- A. Planting soil for all plantings shall consist of existing native soil and shall be free of debris, roots, clay, stones, plants or other foreign materials which might be a hindrance to planting operations or be detrimental to good growth.
- 2.07 FERTILIZER:
- A. Commercial fertilizer shall comply with the state fertilizer laws. Nitrogen shall not be less than 40% from organic source. Inorganic chemical nitrogen shall not be derived from the sodium form of nitrate. Fertilizers shall be delivered to the site in unopened original containers, each bearing the manufacturer's guaranteed analysis. Any fertilizer that becomes caked or otherwise damaged shall be rejected.
- Thoroughly mixed 3 lbs. of commercial fertilizer to each cubic yard of planting soil.

- C. Tableted fertilizer shall be Agriform planting tabs 20-10-5 formula, 21 gram or equal. All trees and shrubs shall be fertilized with tableted fertilizer as follows. While backfilling plant holes, fertilizer tablets shall be equally spaced and placed adjacent to the ball mid-way in depth in accordance with the following rates:
- | | |
|--------------------|-----------|
| 1 gallon container | 1 tablet |
| 3 gallon container | 2 tablets |
| 5 gallon container | 3 tablets |
| 7 gallon | 5 tablets |
- Large tubs, wire baskets, grow bags, and balled and burlapped material shall have 1 tablet for each 1/2 inch of trunk diameter (measured 3 feet from ground) or for each foot of height or spread of larger shrub material.
The Landscape Architect reserves the right to inspect and review the application of fertilizer.

- 2.08 MULCH:
- A. Mulch material shall be clean, dry, free of weeds, seeds and pests, moistened at the time of application to prevent wind displacement. Cypress &/or Red mulch is prohibited.
- B. All trees and shrub beds shall receive 3" mulch immediately after planting and thoroughly watered. Apply 2" max on tree & palm rootballs, keep away from tree & palm trunks or as required by local jurisdiction.

PART 3: EXECUTION

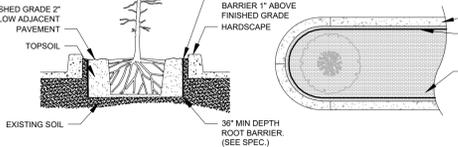

- 3.01 DIGGING:
- A. The Landscape Contractor shall exercise care in digging and other work so as not to damage existing work, including overhead wires, underground pipes and cables and the pipes and hydrants of watering systems. Should such overhead or underground obstructions be encountered which interfere with planting, the Owner shall be consulted and contractor will adjust the location of plants to clear such obstruction. The Contractor shall be responsible for the immediate repair of any damage caused by his work.

- 3.02 GRADING:
- A. Grading for drainage, swales, etc. to within 4 inches of the finished grade to be provided by others.
- B. It shall be the responsibility of the Landscape Contractor to provide the final grading during the course of landscape installation so as to bring sod and planting areas to their proper elevations in relation to walks, paving, drain structures, and other site conditions. The site grading plan must be checked prior to installation of sod to insure that drainage and other conditions will NOT be modified.

- 3.03 PLANTING:
- A. Planting shall take place during favorable weather conditions.
- B. The Contractor shall call for utility locates and ascertain the location of all utilities and easements so proper precautions can be taken not to damage or encroach on them.
- C. Tree Planting shall be located where it is shown on the plan. No planting holes shall be dug until the proposed locations have been staked on the ground by the Contractor.
- D. Excavation of holes shall extend to the required subgrades as specified on the planting diagrams located in the planting plans. Plant pits shall be circular in outline and shall have a profile which conforms to the aforementioned "Tree and Shrub Planting Diagrams".
- E. A representative number of planting pits (a minimum of one in every 25 feet throughout the entire site) shall be tested for proper drainage. See Landscape Plan for complete testing methods and requirements.

- F. Planting pits shall be excavated to the following dimensions and refilled with a mixture of (1/2) planting soil (1/2) existing native soil):
- 1 Gallon material (1 gal.): 12" x 12" x 12" min.
 - 3 Gallon material (3 gal.): 20" x 20" x 18" min.
 - Lerio material (7 gal.): 30" x 30" x 24" min.
- Field grown material and trees: 1-1/2 times width of ball and depth of ball plus 12" min.
- G. No planting or laying of sod shall be initiated until the area has been cleaned of existing sod or other plant materials, rough grass, weeds, debris, stones etc. and the ground has been brought to an even grade, with positive drainage away from buildings and towards drain inlets and swales and approved by Landscape Architect or owner's rep.
- H. Each plant shall be planted in an individual hole as specified for trees, shrubs, and vines.
- I. All plants shall be set to ultimate finished grade. No filling will be permitted around trunks or stems. All ropes, wire, stakes, etc., shall be removed from sides and top of the ball and removed from hole before filling in.
- J. All flagging ribbon shall be removed from trees and shrubs before planting.
- K. Excess excavation (fill) from all holes shall be removed from the site, at no additional expense to Owner.
- L. All palms shall be backfilled with sand, thoroughly washed in during planting operations and with a shallow saucer depression left at the soil line for future waterings. Saucer areas shall be top-dressed two (2) inches deep with topsoil raked and left in a neat, clean manner.

- 3.04 PRUNING:
- A. Remove dead and broken branches from all plant material. Prune to retain typical growth habit of individual plants with as much height and spread as possible in a manner which will preserve the plant's natural character.
- B. Make all cuts with sharp instruments flush with trunk or adjacent branch, in such a manner as to insure elimination of stubs. Cuts made at right angles to line of growth will not be permitted.
- C. Trees shall not be poled or topped.
- D. Remove all trimmings from site.

SPECIAL APPLICATIONS ROOT BARRIER DETAIL
NOT TO SCALE
NOTES:
1- ROOT BARRIER SHALL BE "DEEPROOT" 3/8" DEPTH OR APPROVED EQUAL.
2- ROOT BARRIER SHALL BE INSTALLED PER MANUFACTURER'S SPECIFICATIONS AND RECOMMENDATIONS.

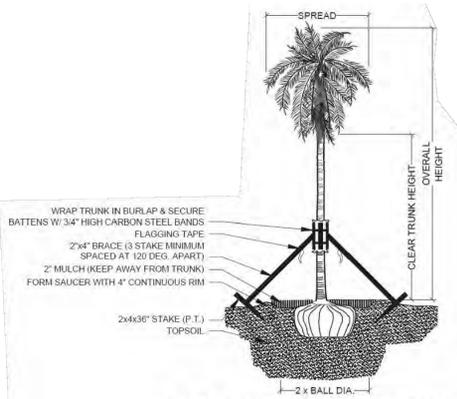

- 3.05 GUYING:
- A. All trees over six (6) feet in height shall, immediately after setting to proper grade, be guyed with three sets of two strands, No. 12 gauge malleable galvanized iron, in tripod fashion. See Detail.
- B. Wires shall not come in direct contact with the tree but shall be covered with an approved protection device at all contact points. Wires shall be fastened in such a manner as to avoid pulling crotches apart.
- D. Stake & Brace all trees larger than 12" oa. See detail.
Stakes shall be 2" x 2" lumber of sufficient length to satisfactorily support each tree.
- E. Turnbuckles for guying trees shall be galvanized or cadmium plated and shall be of adequate size and strength to properly maintain tight guy wires.
- 3.06 WATER:
- A. Each plant or tree shall be thoroughly watered in after planting. Watering of all newly installed plant materials shall be the responsibility of the Landscape Contractor until final acceptance by the Landscape Architect.
- B. See General Notes of Landscape Plan for water source.

- 3.07 SOD:
- A. The Landscape Contractor shall sod all areas indicated on the drawings.
- B. It shall be the responsibility of the Landscape Contractor to fine grade all landscape areas, eliminating all bumps, depressions, sticks, stones, and other debris.
- C. The sod shall be firm, tough texture, having a compacted growth of grass with good root development. It shall contain no noxious weeds, or any other objectionable vegetation, fungus, insects, or disease. The soil embedded in the sod shall be good clean earth, free from stones and debris.
- D. Before being cut and lifted, the sod shall have been mowed at least three times with a lawnmower with the final mowing not more than seven days before the sod is cut. The sod shall be carefully cut into uniform dimensions.
- E. 6-8-6 fertilizer with all trace elements is to be applied at the rate of 40 lbs. per 1,000 sq. ft. prior to laying sod.
- F. Solid sod shall be laid with closely abutting, staggered joints with a tamped or rolled, even surface.
- G. The finished level of all sod areas after settlement shall be one (1") inch below the top of abutting curbs, walks, paving and wood borders to allow for building turf.
- H. If in the opinion of the Landscape Architect, top dressing is necessary after rolling, clean yellow sand will be evenly applied over the entire surface and thoroughly washed in.

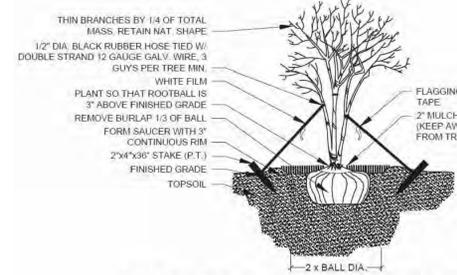

- 3.08 SEEDING:
- A. The Landscape Contractor shall remove all vegetation and rocks larger than (1") in diameter from areas to be seeded, scatty the area, then apply fertilizer at a rate of 500 lbs. per acre.
- B. Application: Argentine Bahia Grass seed - 200 Pounds per acre mixed with common hulled Bermuda seed - 30 lbs. per acre. All other seed mixtures shall be applied per the manufacturer's instructions.
- C. Roll immediately after seeding with a minimum 500 pound roller, then apply straw mulch at the rate of 2,500 pounds per acre.
- D. Apply fertilizer at the rate of 150 lbs. per acre 45-60 days after seeding.

- 3.09 CLEANING UP:
- A. The contractor shall at all times keep the premises free from accumulations of waste materials or rubbish caused by his employees or work. He shall leave all paved areas "broom clean" when completed with his work.

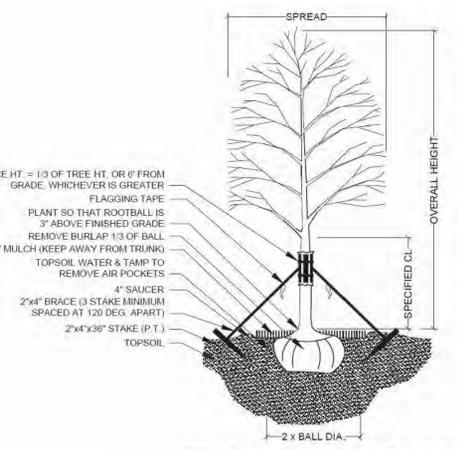

- 3.10 MAINTENANCE:
- A. Maintenance shall begin immediately after each plant is installed and shall continue until all planting has been accepted by the Owner or Landscape Architect. Maintenance shall include watering, weeding, removal of dead materials, resetting plants to proper grades or upright positions, spraying, restoration of planting saucer and/or any other necessary operations.
- B. Proper protection to lawn areas shall be provided and any damage resulting from planting operations shall be repaired promptly.
- C. Replacement of plants during the maintenance period shall be the responsibility of the Contractor, excluding vandalism or damage on the part of others, lightning, or hurricane force winds, until final acceptance.
- D. In the event that weeds or other undesirable vegetation become prevalent, it shall be the Contractor's responsibility to remove them.
- E. Trees or other plant material which fall or are blown over during the maintenance period will be reset by the Contractor at no additional expense to the Owner, the only exception being hurricane force winds.
- 3.11 COMPLETION, INSPECTION AND ACCEPTANCE:
- A. Completion of the work shall mean the full and exact compliance and conformity with the provisions expressed or implied in the Drawings and in the Specifications, including the complete removal of all trash, debris, soil or other waste created by the Landscape Contractor.
- B. Inspection of work to determine completion of contract, exclusive of the possible replacement of plants, will be made by the Owner and/or Landscape Architect at the conclusion of all planting and at the request of the Landscape Contractor.
- C. All plant material shall be alive and in good growing condition for each specified kind of plant at the time of acceptance. The rating of each plant according to Florida Grades and Standards shall be equal to or better than that called for on the plans and in these Specifications at the time of final inspection and acceptance.
- D. After inspection, the Landscape Contractor will be notified by the Owner of the acceptance of all plant material and workmanship, exclusive of the possible replacement of plants subject to guarantee.

- DRAINAGE TESTING/DRAINAGE CHANNEL REQUIREMENTS**
- PRIOR TO PLANTING ALL PLANTING PITS SELECTED FOR TESTING SHALL BE TESTED IN THE FOLLOWING MANNER
- A. DIG EACH PLANTING PIT TO THE MINIMUM SPECIFIED SIZE.
- B. FILL PLANTING PIT WITH TWELVE INCHES (12") OF WATER. IF THE WATER LEVEL DROPS FOUR (4) OR MORE WITHIN FOUR (4) HOURS, THE DRAINAGE IS SUFFICIENT AND A DRAINAGE CHANNEL IS NOT REQUIRED. IF THE WATER LEVEL DROPS LESS THAN FOUR INCHES (4") WITHIN THE FOUR (4) HOUR PERIOD, A DRAINAGE CHANNEL IS REQUIRED.
- C. WHERE REQUIRED, THE DRAINAGE CHANNEL MUST EXTEND DOWN THROUGH THE NON POROUS SOIL AND INTO POROUS SOIL. (SEE DETAIL)
- D. ALL MATERIAL REMOVED FROM THE DRAINAGE CHANNEL SHALL BE DISCARDED.
- E. WHEN BACKFILLING PLANTING PITS WITH PLANTING MIXTURE, CARE MUST BE TAKEN TO KEEP THE CONSISTENCY OF THE SOIL MIX THE SAME THROUGHOUT THE PLANTING PIT AND DRAINAGE CHANNEL.
