Subject: RE: Replacement Nitrogen Super Heater for COH SRWWTP - Proposal

Francois,

Per our telecon yesterday, we can confirm that Chart Industries is the only existing U.S. manufacturer of brazed aluminum heat exchangers of the type required for the COH replacement nitrogen superheater.

At the time the COH cryogenic plant was built, there were two U.S. manufacturers, Trane and Stewart Warner. Trane, thru acquisition, became part of Chart Industries and Stewart Warner went out of business and sold its manufacturing assets to a Chinese company.

There are several other manufacturers of brazed aluminum heat exchangers worldwide but Chart is the only remaining manufacturer in the U.S.

Best regards,

Dennis Derr

Subject: RE: Replacement Nitrogen Super Heater for COH SRWWTP - Proposal

Dennis,

Yes, we would like to proceed but in order to prepare the related City paperwork, I need a formal proposal from your company. Make sure you clearly state in your proposal that this is a spare superheater for the COH, WWTP.

This time around the approval process will be a bit different because we are working under different circumstances (it is not an emergency).

Thanks,
