CITY OF HOLLYWOOD  
OFFICE OF PLANNING

May 31<sup>st</sup>, 2017

City of Hollywood Historic Preservation Board,

As part of our submission for a Certificate of Appropriateness for the design of 3 new homes at 958 Jefferson St. we would like to provide the following narrative to support how the proposed designs meet the criteria of: integrity of location, design, setting, materials, workmanship, and association.

As part of our submission we are demolishing an existing non-contributing single family residence which has been added to with apparent non-conforming nor appropriate additions throughout the years. The structure is deemed non-contributing based on the "Designation Criteria" outlined in the "City of Hollywood Design Guidelines for Historic Properties and Historic Districts" due the position that a. The structure no longer possesses historic character which would reflect its original character and b. The structure is not capable of yielding important information about the period.

We are currently proposing to replace said deficient and non-contributing structure with three new homes that will be more compatible with the spirit and aesthetic of the Historic District without competing or detracting from the importance and historical quality of contributing neighboring structures.

The proposed new structures address the following criteria items:

**Integrity of Location:**

The proposed structures integrate within the historic district and do not detract nor diminish the cohesiveness and integrity of the historic character of the district.

**Design:**

The design of the proposed structures integrate themselves into the fabric of the neighborhood using details and cues that allude to some of the design features found in some of the movements that the district strives to support and preserve such as mid-century modern and streamline. The proposed designs mix contemporary aspects with classic streamline and deco period details such as the extended concrete eyebrows and concrete surround frames. We have inlayed exterior wood paneling to provide texture and variation in finish material again drawing inspiration from the framed frieze panels popular with the tropical deco movement. The mix of the materials and the soft palette is somewhat reminiscent of the pastel color palette also found with period tropical modern without being literal.

**Setting:**

In preserving the setting of the single family area we are proposing three new single family homes. The structures have a residential aspect to them in order to preserve the setting of the district in which they will be located. The massing of the buildings provides a change of scale and massing that is more appropriate to the scale of midcentury homes with side yards and an open feel for the houses that provides a true inside/outside lifestyle and circulation for the homes.

**Naples | Marco Island Office**

marco island, fl. 34145

239.330.8124 off

**Materials:**

The proposed are sensitive in their use of materials by using a restrained palette of proposed wood rain screen system and painted stucco. The placement of the wood rain screen serves to accent and highlight aspects without becoming an overbearing feature but instead alludes to the decorative features used in the deco movement such as friezes and insert panels. The stucco surfaces will be smooth painted stucco.

**Workmanship:**

The level of detailing and accenting will imbue the proposed structures with a rich texturing and layers that will achieve a feel of heightened craftsmanship and workmanship in the detailing of the envelope of the structures.

**Association:**

The proposed structures draw a direct association with the surrounding homes of a mid century modern and streamline character. The proposed designs take inspiration from these mid-century modern structures and attempts to incorporate such cues and details of historic significance in a contemporary fashion.

We hope that the Historic Board will find our proposed structures worthy additions to this beautiful community.

Respectfully,

Hector C. Fernandez, AIA NCARC, USGBC  
Architect | principal

1. *Chlorophyll a* (Chl *a*) is the primary photosynthetic pigment in most plants and algae. It is a green pigment that absorbs light energy in the blue and red regions of the visible spectrum. Chl *a* is essential for the light-dependent reactions of photosynthesis, where it converts light energy into chemical energy.

2. *Chlorophyll b* (Chl *b*) is an accessory pigment found in green plants and algae. It is a yellow-green pigment that absorbs light energy in the blue and orange regions of the visible spectrum. Chl *b* transfers the absorbed energy to Chl *a* for use in photosynthesis.

3. *Carotenoids* are a group of pigments that include carotenes and xanthophylls. They are responsible for the yellow, orange, and red colors seen in autumn foliage. Carotenoids absorb light energy in the blue and green regions of the visible spectrum and transfer the energy to Chl *a*. They also play a role in protecting the photosynthetic apparatus from damage by reactive oxygen species.

4. *Xanthophylls* are a subset of carotenoids that are primarily responsible for the yellow color of autumn leaves. They absorb light energy in the blue and green regions of the visible spectrum and transfer the energy to Chl *a*. Xanthophylls also play a role in the photoprotection of the photosynthetic apparatus.

5. *Anthocyanins* are water-soluble pigments that are responsible for the red, purple, and blue colors seen in some autumn foliage. They are not directly involved in photosynthesis but can protect the plant from damage by UV radiation and other environmental stressors.
