Re: Temple Solel Day School – Traffic Study

Dear Rabbi Albert:

Traf Tech Engineering, Inc. is pleased to provide you with the results of this traffic study undertaken for the proposed Temple Solel Day School to be located on the southeast corner of the intersection of Sheridan Street and N 52 Avenue in the City of Hollywood in Broward County, Florida.

It has been a pleasure working with you on this project.

Sincerely,

TRAF TECH ENGINEERING, INC.

Joaquin E. Vargas, P.E.
Senior Transportation Engineer

IINTRODUCTION

Temple Solel Day School is a proposed educational institution planned to be located on the southeast corner of the intersection of Sheridan Street and N 52 Avenue in the City of Hollywood in Broward County, Florida. The location of the school site is illustrated in Figure 1 on the following page.

Traf Tech Engineering, Inc. has been retained by the Jewish School of Miami, Corporation to conduct a traffic study in connection with this education facility. The subject school will have a capacity of 381 students. This study addresses trip generation and the traffic impacts created by the proposed project on the nearby transportation network. This study is divided into eight (8) sections, as listed below:

1. Inventory
2. Existing Conditions
3. Traffic Counts
4. Trip Generation
5. Trip Distribution and Traffic Assignment
6. Traffic Analyses
7. Accumulation Analysis
8. Conclusions and Recommendations

ENGINEERING, INC.

PROJECT LOCATION MAP

FIGURE 1
Temple Solel Day School
Hollywood, Florida

INVENTORY

Existing Land Use

The site is currently occupied by a Daycare facility with approximately 100 students.

Proposed Land Use and Access

The site will be redeveloped with a new school housing 381 students (Grades K to 8th)

The proposed school is anticipated to be built and occupied in the Fall of 2019.

Appendix A contains the proposed site plan for the proposed School.

EXISTING CONDITIONS

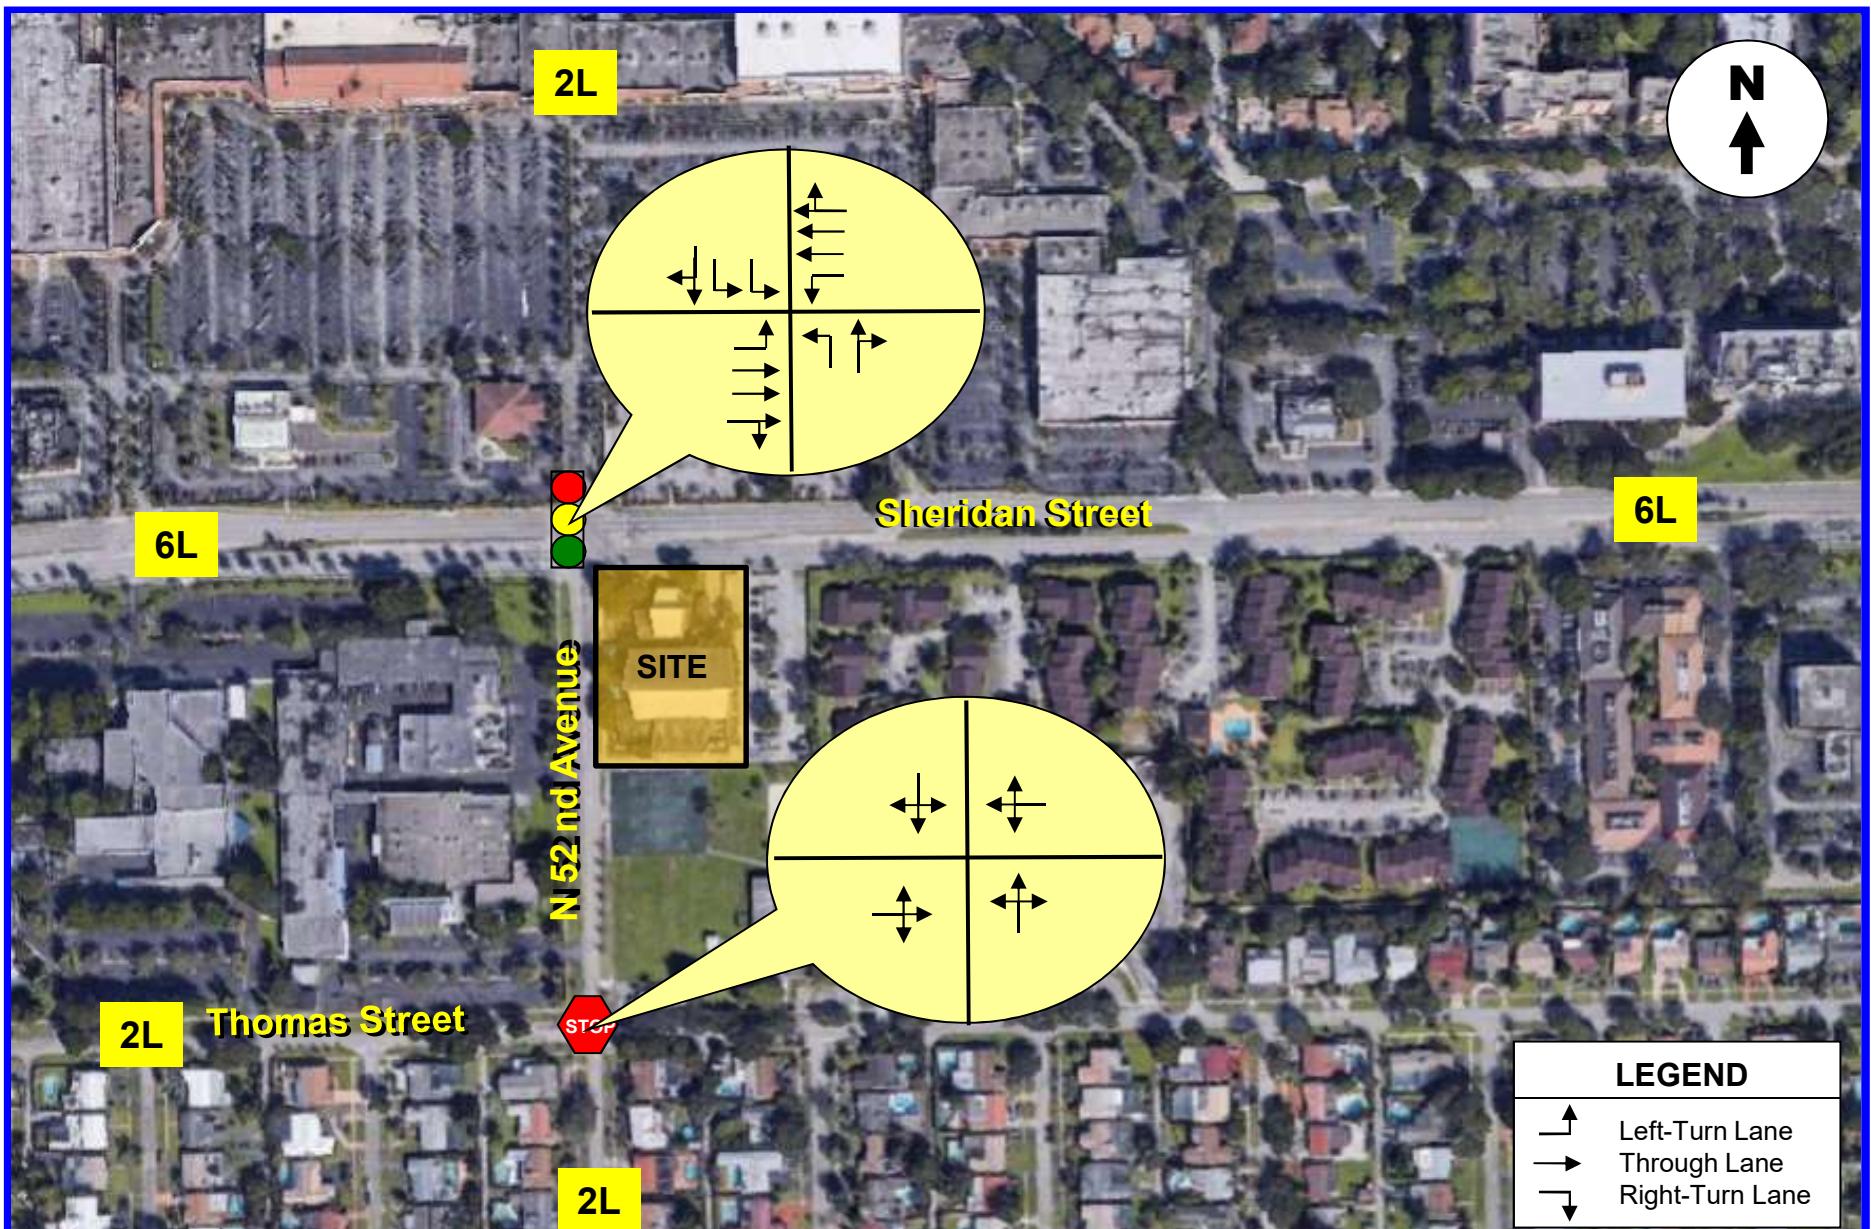

This section of the report addresses the transportation system located in the vicinity of the project site.

Roadway System

The roadway system located in the vicinity of the proposed school includes Sheridan Street and N 52 Avenue. Sheridan Street is an east-west arterial with three through lanes in each direction (six-lane divided facility) and a posted speed limit of 40 miles per hour. N 52 Avenue is a 2-lane local street oriented in the north-south direction with a posted speed limit of 30 miles per hour.

Nearby Intersection

The closest intersections to the school site include the intersection of Sheridan Street & N 52 Avenue that is controlled with traffic signal and the intersection of N 52 Avenue and Thomas Street that is currently controlled by stop signs (all-way stop control intersection). Figure 2 shows the existing lane geometry of the closest intersections and the number of lanes on the street system surrounding the school site is also depicted in this figure.

ENGINEERING, INC.

EXISTING LANE GEOMETRY

FIGURE 2
Temple Solel Day School
Hollywood, Florida

TRAFFIC COUNTS

Traf Tech Engineering, Inc., in association with Video Data Solutions, Inc., collected traffic data at the following locations:

- Sheridan Street and N 52 Avenue (signal)
- Thomas Street and N 52 Avenue (stop)

The intersection turning movement counts were collected on Tuesday, April 24, 2018 during the AM peak period (7:00 AM to 9:00 AM) and the PM peak period (4:00 PM to 6:00 PM). The existing AM and PM peak hour traffic counts are presented in Figure 3 on the following page. Appendix B contains the traffic data as collected in the field. As shown in the traffic counts, Sheridan Street is currently carrying a maximum hourly volume of approximately 2,457 vehicles per hour (east of N 52nd Avenue during the AM peak hour). Similarly, N 52nd Avenue has a maximum hourly volume of approximately 339 vehicles per hour (south of Sheridan Street during the AM peak hour). The signal timing plan for the signalized intersection is also contained in Appendix B.

Traf Tech
ENGINEERING, INC.

EXISTING TRAFFIC COUNTS

FIGURE 3
Temple Solel Day School
Hollywood, Florida

TRIP GENERATION

A trip generation analysis was conducted for the proposed school. The analysis was performed using the trip generation equations published in the Institute of Transportation Engineer's ITE Trip Generation Manual (10th Edition). The trip generation analysis was undertaken for daily, AM peak hour, and PM peak hour conditions.

According to ITE's Trip Generation Manual (10th Edition), the most appropriate "land use" category for the proposed land use is:

PRIVATE SCHOOL K-8 (ITE Land Use 534)

Daily Trip Generation

$$T = 4.11 (X)$$

Where T = number of daily trips

X = number of students

AM Peak Hour

$$T = 0.85 (X) + 22.17 \text{ (55% inbound and 45% outbound)}$$

Where T = number of AM peak hour trips

X = number of students

PM Peak Hour

$$T = 0.26 (X) \text{ (46% inbound and 54% outbound)}$$

Where T = number of PM peak hour trips

X = number of students

Using the above-listed trip generation equations from the ITE document, a trip generation analysis was undertaken for the proposed project. The results of this effort are documented in Table 1 below.

TABLE 1 Trip Generation Summary (Proposed Uses) Temple Solel Day School								
Land Use	Size	Daily Trips	AM Peak Hour			PM Peak Hour		
			Total Trips	Inbound	Outbound	Total Trips	Inbound	Outbound
Private School (K-8)	381	1,566	346	190	156	99	46	53
External Trips		1,566	346	190	156	99	46	53

Source: ITE Trip Generation Manual (10th Edition)

As indicated in Table 1, the proposed school is anticipated to generate approximately 1,566 daily trips, approximately 346 AM peak hour trips (190 inbound and 156 outbound) and approximately 99 trips (46 inbound and 53 outbound) during the typical afternoon peak hour.

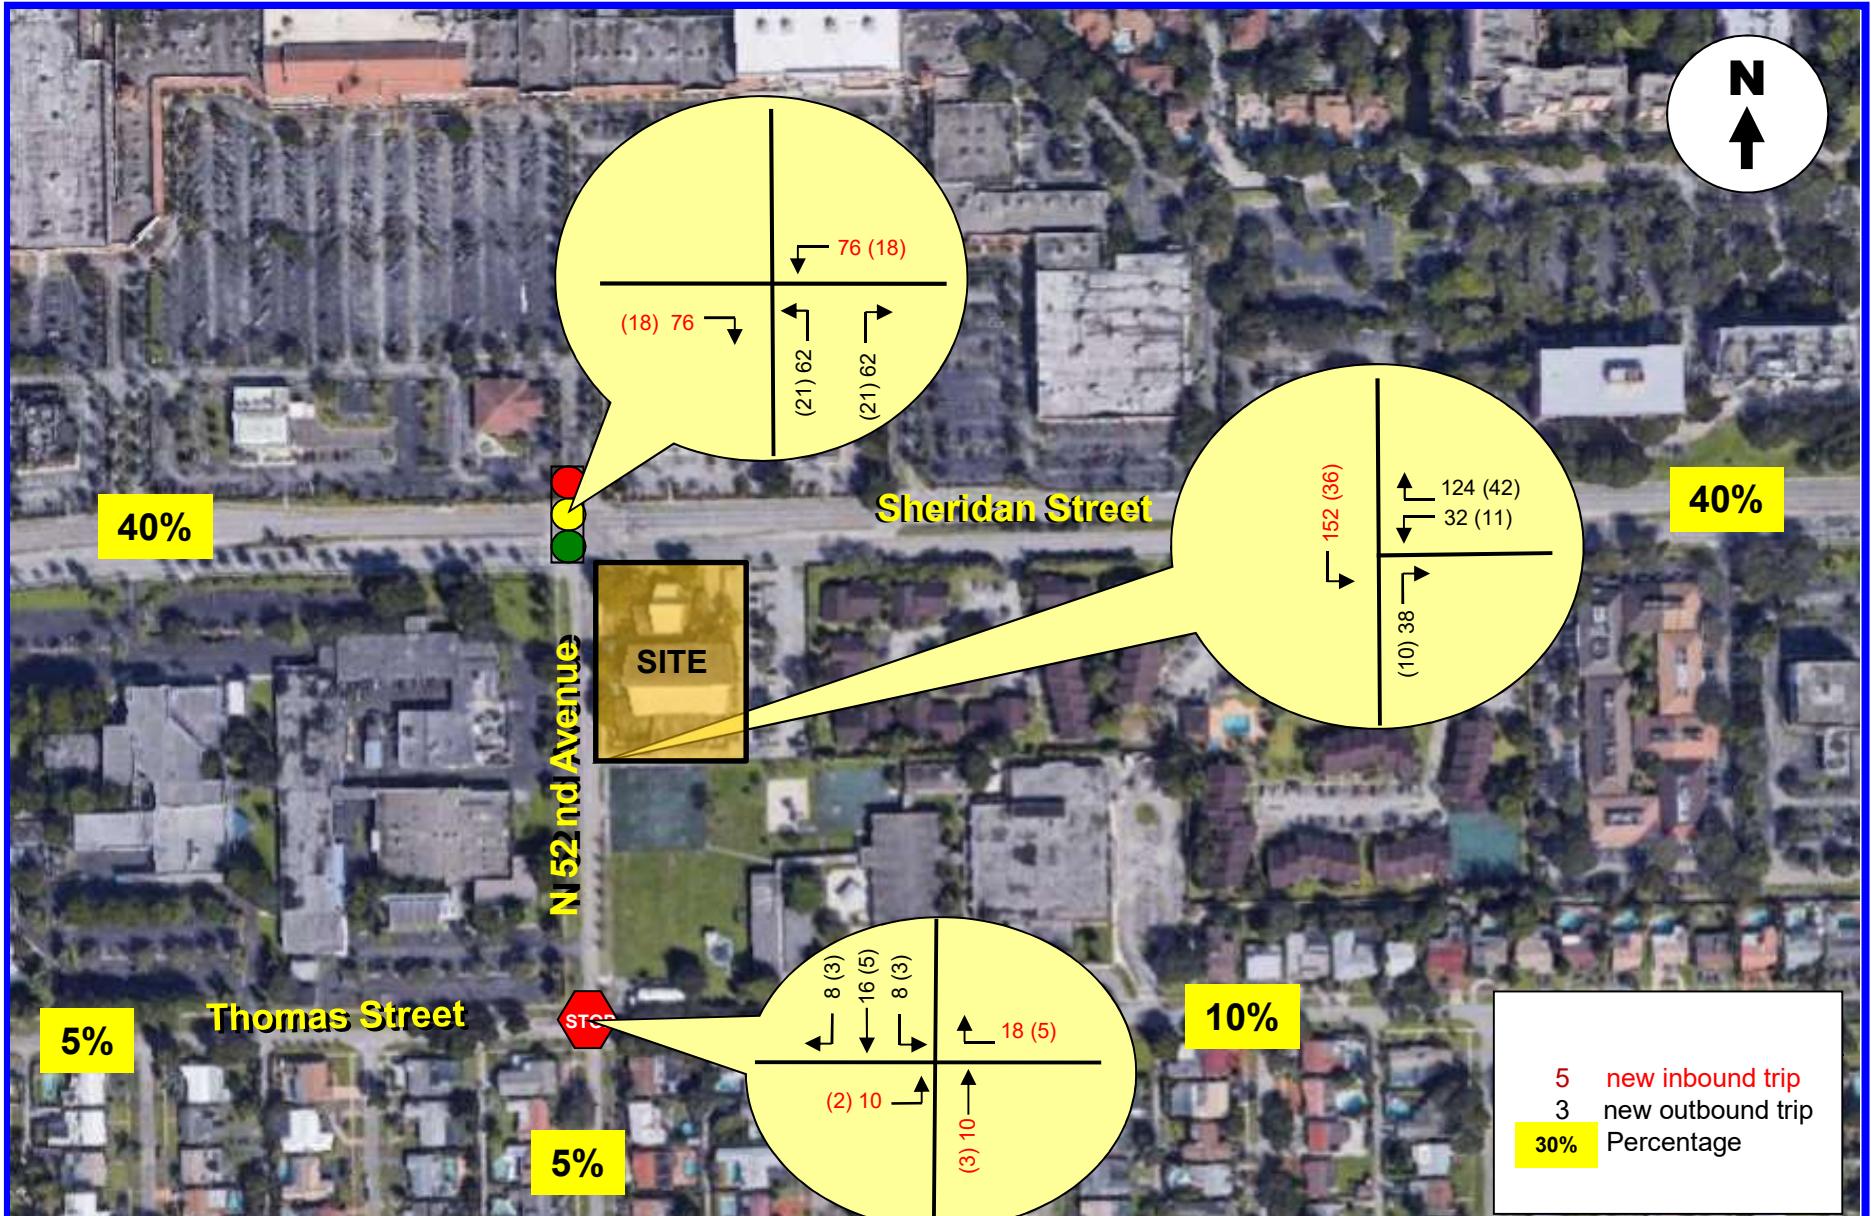

It should be noted that trips generated by the existing Daycare facility were not deducted from the trip generation to provide a conservative approach.

TRIP DISTRIBUTION AND TRAFFIC ASSIGNMENT

The trip distribution and traffic assignment for the project were based on the residential homes located within a 2-mile radius from the site. Based on this procedure, the following traffic assignment was developed for the proposed school project:

- 20% from the south via N 52 Avenue
 - 5 % on Thomas Street west of N 52 Avenue
 - 10% on Thomas Street east of N 52 Avenue
 - 5% on N 52 Avenue south of Thomas Street
- 40% to and from the east via Sheridan Street
- 40% to and from the west via Sheridan Street

The new peak hour traffic generated by the project was assigned to the nearby transportation network using the traffic assignment documented above. The project traffic assignment is summarized in Figure 4.

TRAFFIC ANALYSES

This section of the study addresses the traffic impacts created by the Temple Solel Day School to the surrounding street system. As stated in the traffic counts section of this report, Sheridan Street currently carries approximately 2,457 vehicles during the highest hour (5:00 PM to 6:00 PM) and N 52 Avenue currently processes approximately 339 vehicles per hour. According to FDOT 2013 Quality/Level of Service Handbook, Sheridan Street has a level of service “D” capacity of 5,390 vehicles per hour and N 52 Avenue has a level of service “D” capacity of 1,197¹ vehicles per hour. Based on the above and the new traffic impacts depicted in Figure 4, the following conclusions are reached:

- Sheridan Street currently has an existing traffic volume of 2,457 vehicles per hour, plus 138 new peak hour trips generated by the school during the highest hour (AM Peak) = 2,595 vehicles per hour. Since this east-west facility has a capacity of 5,390 vehicles per hour, after the school is built the total peak hour trips is projected at 2,595 vehicles per hour, leaving 2,795 vehicles per hour of available capacity, which is approximately 50% of reserved capacity.
- N 52 Avenue currently has an existing traffic volume of 339 vehicles per hour, plus 70 new peak hour trips generated by the school during the highest hour (AM Peak) = 409 vehicles per hour. Since this north-south facility has a capacity of 1,197 vehicles per hour, after the school is built the total peak hour trips is projected at 409 vehicles per hour leaving approximately 788 vehicles per hour (66 %) of available roadway capacity.

Based on the above, ample roadway capacity is available on both Sheridan Street and N 52 Avenue to absorb the additional traffic impacts created by the proposed school.

¹ $(1,330 \times 0.90) = 1,197$ vehicles per hour.

Intersection Level of Service

The intersections of Sheridan Street & N 52 Avenue and Thomas Street & N 52 Avenue were evaluated for existing conditions, future conditions with and without the project. Figures 5 and 6 present the future traffic volumes for the study area. Figure 5 includes background traffic only (without the proposed project) and Figure 6 includes the additional traffic anticipated to be generated by the proposed school project.

Level of service analyses were undertaken following the capacity/level of service of the Highway Capacity Manual using the SYNCHRO software. For this analysis, intersection turning movement counts collected during the month of April were adjusted by an adjustment factor of 1.02 to convert the traffic counts to average peak season conditions. The results of the intersection analyses are summarized in Table 2.

TABLE 2
Intersection Level of Service
Temple Solel Day School

BACKGROUND TRAFFIC

FIGURE 5
Temple Solel Day School
Hollywood, Florida

Traf Tech
ENGINEERING, INC.

TOTAL TRAFFIC with PROJECT

FIGURE 6
Temple Solel Day Shool
Hollywood, Florida

As indicated in Table 2, all intersections are expected to operate at acceptable level of service in the year 2019 with the project in place.

The access driveway off of N 52 Avenue, as proposed, is projected to operate at acceptable level of service with the proposed project in place.

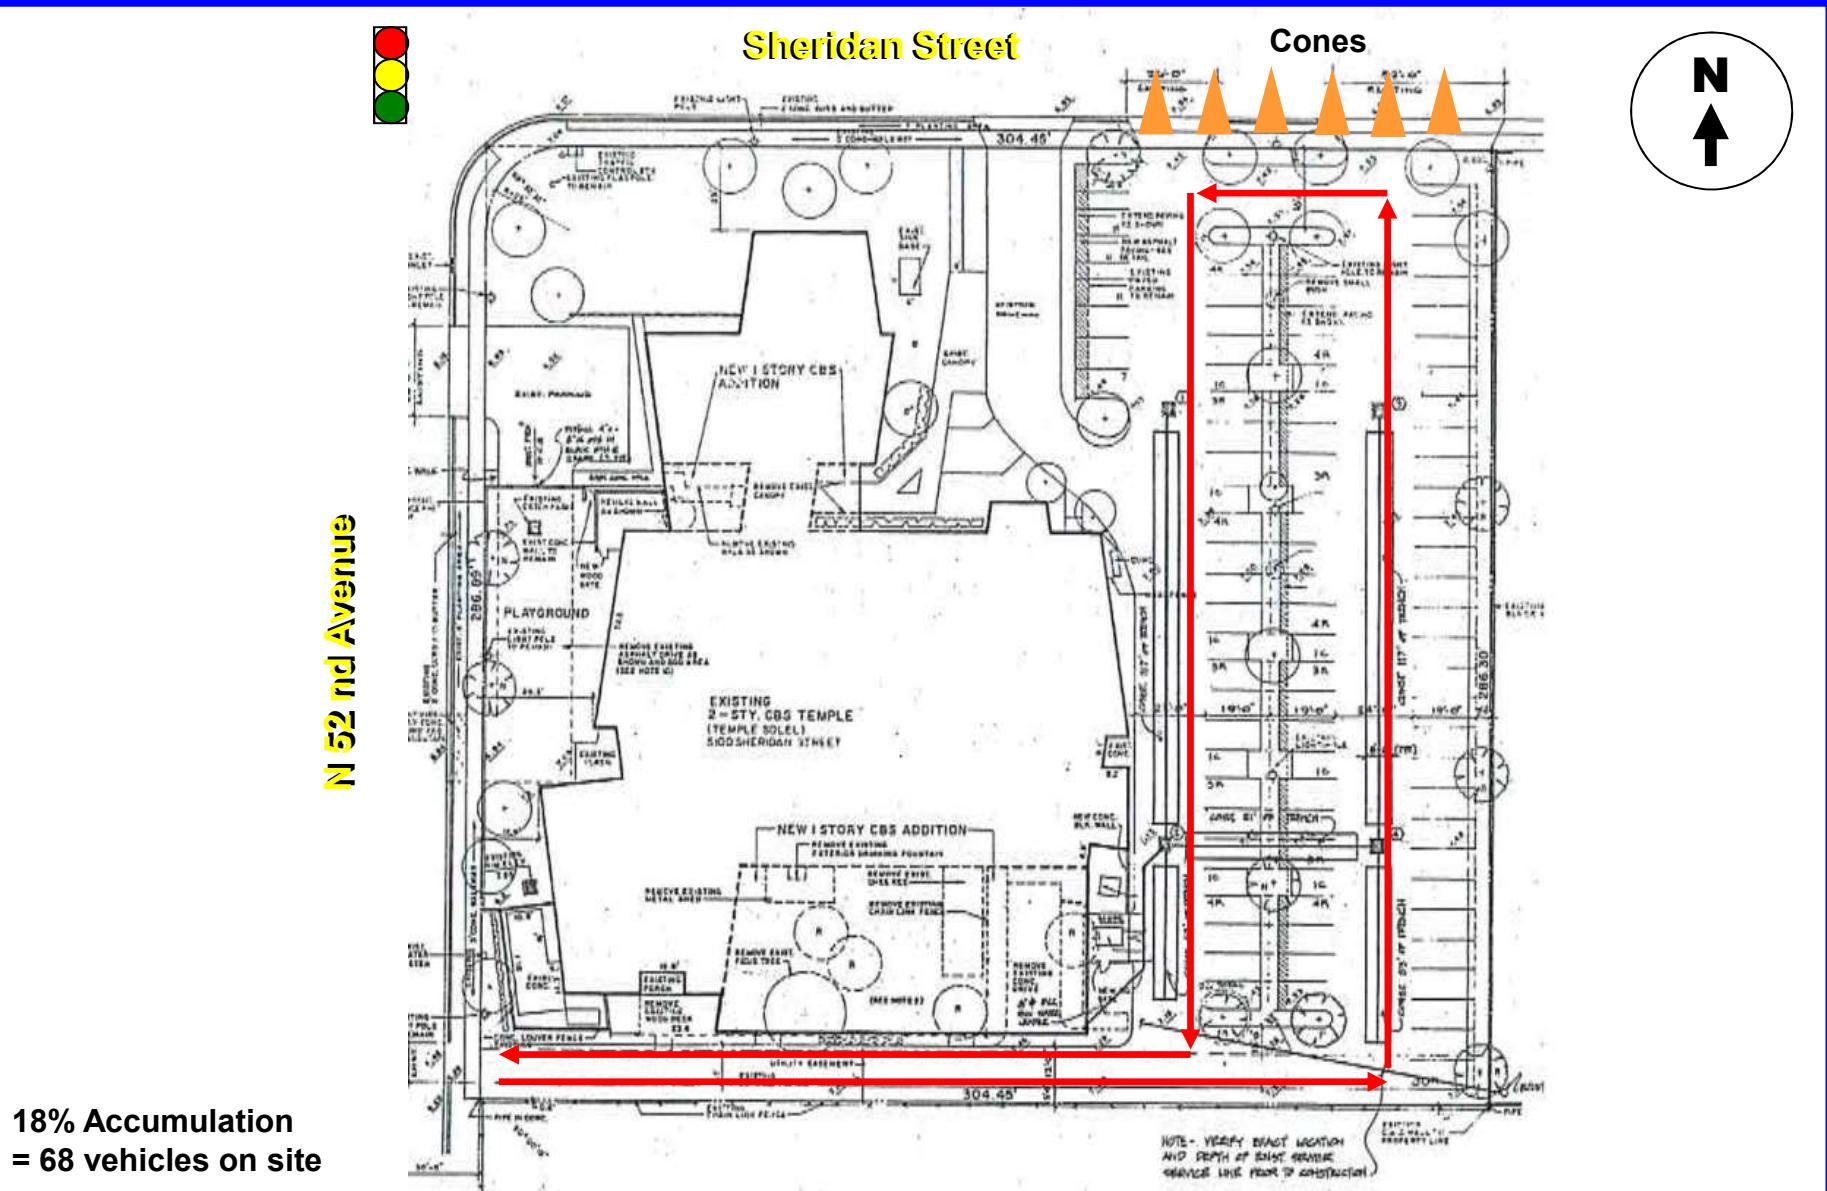

Appendix C contains the peak season conversion factor published by the FDOT and the future traffic projections for the study intersections. The results of the SYCNRHO analyses are presented in Appendix D.

ACCUMULATION ANALYSIS

A vehicle accumulation study was conducted for the proposed Temple Solel Day School. Based on vehicle accumulation studies conducted by Traf Tech Engineering, Inc. on schools in South Florida, the typical vehicle accumulation (vehicles in queue and parked vehicles) of schools ranges between 11% and 18% of the student population. For purposes of this study, the vehicle accumulation was assumed to be 18% of the student population, or 68 vehicles ($381 \times 18\%$). Since the proposed school is design to accommodate approximately 46¹ vehicles within the stacking lanes plus 87 parking spaces for a total on-site accumulation capacity of approximately 133 vehicles (46 plus 87). Therefore, stacking should not be a problem (capacity to accommodate 68 vehicles is required and 133 vehicles can be accommodated on site).

A Traffic Operations Plan (TOP) has been developed for the proposed charter school and is depicted in Figure 7.

¹ Approximately 1,030 linear feet at 22 feet per vehicle is approximately 46 vehicles.

Traf Tech

School Circulation

CONCLUSIONS AND RECOMMENDATIONS

Temple Solel Day School is a proposed educational institution planned to be located on the southeast corner of Sheridan Street and N 52 Avenue in the City of Hollywood in Broward County, Florida.

Traf Tech Engineering, Inc. has been retained by the Jewish School of Miami, Corporation to conduct a traffic study in connection with this education facility. The subject school will have a capacity of 381 students. This study addresses trip generation and the traffic impacts created by the proposed project on the nearby transportation network.

The site is currently occupied by a Daycare facility with approximately 100 students. The site will be redeveloped with a new school housing 381 students (Grades K to 8th). The proposed school is anticipated to be built and occupied in the Fall of 2019.

Ample roadway capacity is available on both Sheridan Street and N 52 Avenue to absorb the additional traffic impacts created by the proposed school.

Results of the intersection level of service analysis reveal that all intersections are projected to operate at acceptable level of service in the year 2019 with the proposed school project in place.

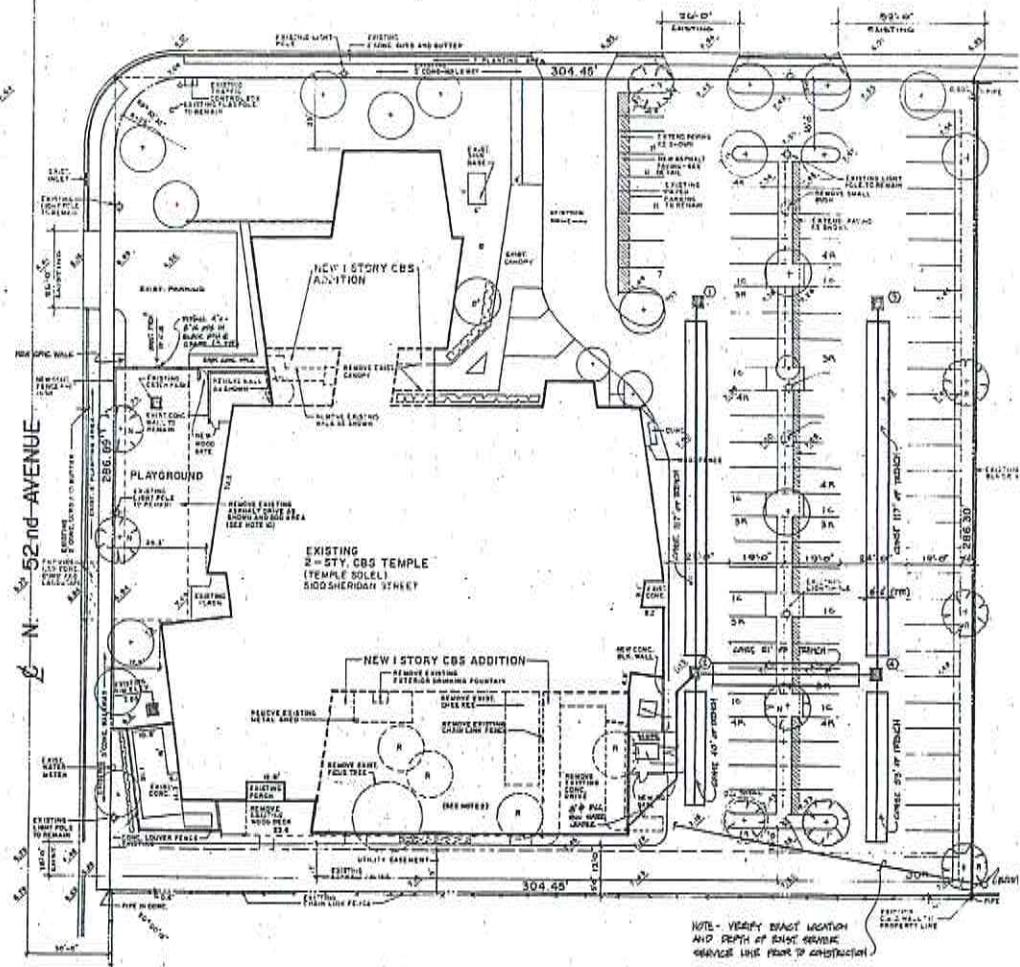

The access driveway off of N 52 Avenue, as proposed, is projected to operate at acceptable level of service with the proposed project in place.

The proposed school is design to accommodate approximately 46 vehicles within the stacking lanes plus 87 parking spaces for a total on-site accumulation capacity of approximately 133 vehicles (46 plus 87). Since the maximum vehicle accumulation anticipated for this school is 68 vehicles, stacking should not be a problem.
